(a) threshold near an end
midpoint $\theta = 1/2$
continuation
bisection
direct solve
$B^* = 0.78903$
rescaled threshold $b_c\, d$
time τ_c/d^2
$c_* = 0.15792$
distance to nearer end d
(b) half-line limit
$B = 0.5$
$B = B^*$
$B = 1.2$
merger (c_*, B^*)
valley
delayed peak
interval
$d = 0.2$
$d = 0.1$
$d = 0.05$
rescaled density Φ_{hl}, $d^2\Phi$
rel. deviation
round-off floor (all d)
rescaled time $\sigma = \tau/d^2$
(c) simulation on the half-line
mass at $\sigma > 3$
BD | exact
0.245 | 0.244
0.145 | 0.144
Φ_{hl}, $B = 0.5$
Φ_{hl}, $B = 1.2$
Brownian dynamics
(gate $\ell = 0.02$)
absorption-time density
rel. residual
rescaled time σ
