(a) lattice MC vs exact
MC, 4×10^5 walkers
exact
$N = 100$
$\theta = \xi = 1/2$
$b = 2.6$
absorption-time density
time $\tau = qt/N^2$
(b) absorption routes
total
capture via shortcut
arrival at the ends
$N = 100$
$\theta = \xi = 1/2$
$b = 2.6$
time $\tau = qt/N^2$
(c) sink at $\theta = 0.38$
$b = 1.5$
$b = 2.16$
$b = 2.8$
$N = 100$
release at the sink
time $\tau = qt/N^2$
