(a) $b = 2.5$: two interior peaks
early peak
Brownian dynamics (gate $\ell = 0.02$)
exact point-sink density
$\xi = 0.44$, $\theta = 1/2$
late peak
valley
absorption-time density
time τ
(b) $b = 3.8$: one interior peak
early peak
Brownian dynamics (gate $\ell = 0.02$)
exact point-sink density
$\xi = 0.44$, $\theta = 1/2$
no late peak
(shoulder)
time τ
